

Developer

📍 Ciudad Victoria, Tamaulipas, México

SKILLS

- React JS and React Native (Frontend)
- Node.js with Express y Sequelize (Backend efficient and scalable)
- relational and non-relational databases: SQL Server, MySQL, MongoDB, Postgre
- Desing and use of software design patterns for scalable solutions
- Integration and develop of secure API REST (Session and JWT)
- Handle of development tools such as Git and Docker

LANGUAGES

- Spanish (Native)
- English (Upper Intermediate)

EDUCATION

Ciudad Victoria Technology Institute

Computer Systems Engineering

Josué Isaí Nolasco Quintero

ABSTRACT

Full-stack developer with over 5 years of experience building web and mobile solutions using **React, React Native, Node.js, PHP, and ASP.NET**. Skilled in both relational and non-relational databases, as well as design patterns. Proven track record of **leading projects that enhance institutional efficiency through process automation and scalability**. Committed to delivering **scalable, efficient, and well-documented products**, with strong expertise in frontend, backend, and complex system management.

PROFESSIONAL EXPERIENCE

Developer – Smart City Soft | México

Apr 2023 – Feb 2024

Actively contributed to the full development of the **Self-Service Counter** platform, aimed at optimizing administrative management and interaction for multiple municipal governments in Mexico. Implemented solutions using **React** combined with modern libraries such as **MUI Material** for design, and developed the backend with **Node.js** and **Mongoose** to ensure proper data handling and scalability. Focused on optimizing user flows and scaling the system to support the load and functionality required by over 10 municipalities.

- Developed intuitive and responsive user interfaces with React and MUI Material, enhancing user experience and facilitating system adoption.
- Implemented and maintained backend architecture with Node.js and Mongoose, ensuring data integrity and availability in non-relational databases.
- Collaborated on overall system performance optimization to ensure efficient response times under high concurrent loads.
- Contributed to the planning and execution of system expansion to simultaneously support multiple municipal governments.

Tools/Skills: React, MUI Material, Node.js, Mongoose, JavaScript, Git, REST APIs, UX Optimization, System Scalability.

Developer – Secretariado Ejecutivo del Sistema Estatal de Seguridad Pública Tamaulipas | Ciudad Victoria, Tamaulipas

Mar 2020 – Present

Lead the development of web, mobile, and desktop systems aimed at improving internal processes for control, administration, and monitoring within the state public security system. Utilize technologies such as React, Node.js, and relational databases like SQL Server to build robust and scalable solutions. Through the automation of key processes, achieved a 40% reduction in processing times, significantly increasing operational efficiency.

August 2014 – February 2019

- Designed and developed cross-platform platforms integrating administrative functionalities and real-time monitoring.
- Automated critical processes, accelerating workflow and reducing manual operational load.
- Implemented robust design patterns to ensure long-term maintainability and scalability of software.
- Managed SQL Server databases, ensuring data integrity, security, and high availability.
- Collaborated continuously with multidisciplinary teams to align technological developments with institutional strategic goals.

Tools/Skills: React, Node.js, SQL Server, JavaScript, TypeScript, Process Automation, Scalable Software Design, Git, REST APIs.
